

Anti-Grab Hooks

Prevent Hooks from Catching on Trucks or Loads During Tarping

To continuously improve our products, we have developed an Anti-Grab Hook. This hook features a protruding rod past the hook throat that greatly reduces the likelihood of catching on the edge of a semi trailer or any other object when the strap is being raised close to the load.

This new design does not in any way slow the process of the operator connecting or disconnecting the tarp. The new Anti-Grab Hook comes attached to our swivel shackle and pin fastener to provide the same fast and easy connection to the lifting straps.

With the Anti-Grab Hook installed on your Tarping System, you greatly reduce or eliminate the need to purchase replacement hooks. This assures that your system will be the fastest, safest and most maintenance-free Tarping System in the world.

How it Further Improves Tarping Operation

- Protruding arm leaves minimal area for hook end to grab
- Reduction of grab potential ensures even safer tarping
- Minimized grab incidents increases safety and cost savings
- Fewer grab incidents reduces hook replacement costs

Safe, efficient and cost-effective operation

Pricing: \$375 (set of 15 hooks)
