

# Certified Inspections for Tarping Systems

## Meet OSHA Requirements for Annual Inspection

U.S. Tarping Systems offers annual inspection services to ensure that your Tarping System maintains its optimal level of performance along with OSHA compliance. Inspection services are available for newly purchased systems or for existing U.S. Tarping Systems installations.

Our factory-trained inspector will visit your site once a year for a thorough examination of your Tarping System. To reduce costs, sites are scheduled to fit our annual inspection route. If you have any repair or maintenance issues between your inspection dates, service staff is available as needed.

The inspection begins with a detailed review of all systems within the tarping station. The inspector then makes any necessary mechanical adjustments. Our service vehicle is equipped with all factory replacement parts and fluids, so any and all services can be completed in a single visit.

After the inspection process, the inspector will provide additional operational training as needed. When our inspector completes his work, you can rest assured that your Tarping System is OSHA compliant and is operating at its maximum performance level.
