

Truck Tarping Systems

Safe Flatbed Truck Tarping Tarp Loads and Never Leave the Ground

Every year many accidents occur related to drivers tarping their flatbed loads, and the majority of these accidents result in significant time loss. Some create permanent disabilities and a few even lead to death. Although the monetary cost of an accident can be very high, making sure everyone goes home safe at the end of the day is the most important concern to all.

The Powered Truck Tarping System is manufactured by U.S. Metal Works to minimize the time-consuming and dangerous task of laying out tarps on top of loads. It enables a single user to tarp a load and never leave the ground. It doesn't get any safer than that.

The system is a proven design of heavy-duty construction with oversize motors and drives, requiring very low maintenance. It lifts and spreads up to 60 feet of tarp in one operation. Because of the simplicity of design and operation, minimal training is required.

Can be installed in your existing building

Safety Begins Here!

- Fastest, most efficient system available
- Maximizes number of trucks tarped per day
- Reduces labor costs through single driver operation
- Eliminates exposure to fall accidents and claims
- Ideal for any industry where truck loads are tarped
- Lifts and spreads up to 60 feet of tarp in one operation
- Laps and spreads two tarps in one operation
- Covers uneven loads through lateral tarping process
- Proven system manufactured and installed for 20+ years

Options:

- Pre-engineered building with bridge assembly
- Bridge assembly and drive rails for existing buildings
- Free-standing support structure for existing buildings
- Pendant control or wireless remote control
- Video training station with looping instructions
